

Tylka F1

Type:

An indeterminate hybrid for fresh market with excellent sweet taste.

The variety is known for high production of oval shape and very firm fruits and is ideal for all domestic African markets where elongated fruits are requested.

The very vigorous plant with good cover produces high yields of high quality fruits with good transportability. Suitable for greenhouse and open field.

Nursery period: 3-4 weeks.

Earliness: Medium early.

Maturity: 90 days after transplanting.

Plant: Indeterminate, very vigorous, good cover and high yielding.

Production/Yield:

70-78 tons per acre under good agricultural practices.

Fruit:

Very firm elongated, non-green back, smooth and firm oval fruits with an average fruit weight of 120-130gm.

Shelf life: Over 21 days.

Disease tolerance: • Tomato Yellow Leaf Curl Virus (TYLCV).

- Tomato Mosaic Virus (ToMV): 0-2.
- Verticillium & Fusarium Wilt (race 1 and 2).
- Nematodes (M. incognita/++).

10,000 seeds per Acre
