

# CODABOR (14% Liquid Boron)

Codabor is a liquid formulation with a high boron concentration (140 g/l).

FORMULATION: Liquid formulation.

DESCRIPTION:- Codabor is recommended for both foliar and root applications to prevent and correct nutritional deficiencies of boron, essential for pollination. and fruit-setting.

MODE OF ACTION:- The boron supplied by codabor improves the synthesis and transport of sugars in the plant and directly influences cell growth, increasing crop production and quality

Crop	Doze rate	Methods and terms of Maximum number of treatment	Max. number of treatments
Soybean /French beans	1–2 liters per hectare	Application in a 3–5-leaf phase before flowering	3 times per season
Vegetables	1–2 liters per hectare	Applying during growing season before flowering and green fruit	3 times per season
Coffee	2–3 liters per hectare	Before flowering	2 times per season
Macadamia	2–3 liters per hectare	Before flowering	2 times per season
Corn (wheat, barley)	2–4 liters per hectare	Application in autumn is carried out in a 3–5-leaf phase. Application in spring is carried out in a phase from tillering to heading.	3 times per season
Flowers / Roses	1-3 Litres per Hectare	One application every month	2-3 times per flush

## APPLICATION METHOD AND DOSES

Codabor is applied by foliar spray or fertigation.

Foliar	Concentration: 100-200 cc/hl Doses: 1-2 lts/ha - application  N° applications: 1-3 / crop cycle
Root application	1-3 lts/ha - application  N° applications: 2-4 / crop cycle

### APPLICATION TIMING:

#### TREE CROPS:

- pre flowering
- Fruit setting
- Fruit development

**OTHER CROPS:** apply from first stages of crop development

TOXICOLOGICAL : The liquid complex is not affected by any toxicological policy, neither in transporting nor in storage

### INFORMATION:

**CAUTION:-** Storage recommended between 5-20<sup>0</sup> C .Do not store more than 5 levels high of product .Its application is recommended with the advice of an agronomist  
**SHAKE THE PRODUCT BEFORE USE!**

COMPATIBILITY: Codabor is compatible with most of the phytosanitary products. It is recommended to do a compatibility test before doing a definite joint mixing or applying. DO NOT apply on plumbs.
